Project Type: E-commerce Website

1. What type of business or service do you want to create a website for?

I want to create an e-commerce website that sells everyday consumer products such as electronics accessories, fashion items, and lifestyle products. The website will allow users to browse products, add them to cart, and purchase them online easily.

2. Who are your main competitors, and are there any you want to emulate?

The main competitors are popular e-commerce platforms such as Amazon, Daraz, and AliExpress.

I want to emulate Amazon for its clean user experience and Daraz for its simple layout and localized shopping experience.

3. How is the service positioned in the market?

The service is positioned as a simple, affordable, and user-friendly online shopping platform, especially suitable for beginners and regular users who want a smooth and fast shopping experience.

4. What is the overall goal of the service?

The main goal of the service is to help customers easily discover, compare, and purchase products online, while building a trusted platform that can grow into a profitable online business in the future.

5. What advantages will the app have over its competitors?

Simple and clean user interface
Faster product search and filtering
Beginner-friendly design
Focus on essential features without complexity
Mobile-first and responsive layout

6. What features and elements should receive special attention?

Homepage product layout
Search bar and filters

Product detail pages
Add to cart and checkout flow
Clear call-to-action buttons
Simple navigation menu

7. How do you envision the users of the app?

The users will mostly be:
Young adults and students
Online shoppers with basic internet knowledge
People who prefer quick and simple shopping
They may not be very tech-savvy, so the interface should be intuitive and easy to understand.

8. In what context do you think customers will use the service?

Customers will mostly use the service:

On their smartphones

At home or during free time

While comparing prices and products

When looking for quick online purchases

9. What is the primary customer scenario?

A user visits the website, searches for a product, views product details, adds it to the cart, and completes the checkout process smoothly within a few minutes.

10. What sections will definitely be included in the website's structure?

Header with logo and navigation
Homepage
Product listing page
Product detail page
Cart page
Checkout page
User login / signup
Footer with contact and policy information

11. Is there any functionality planned for the future that won't be implemented now?

Yes. Future planned features include:
User reviews and ratings

Order tracking system
Seller dashboard
AI-based product recommendations
Multiple payment gateway integration

12. Will a loyalty program be part of the service?

Yes. In the future, a loyalty program will be added where users can earn points for purchases and redeem them for discounts or special offers.

Final Project Description

This project is an e-commerce website prototype designed to provide a simple, user-friendly online shopping experience. The main focus of the project is usability, clean design, and smooth customer flow from product discovery to checkout. The website is designed with future scalability in mind and has strong potential to grow into a real commercial online business.
